

Phase 7: Integration and External Access

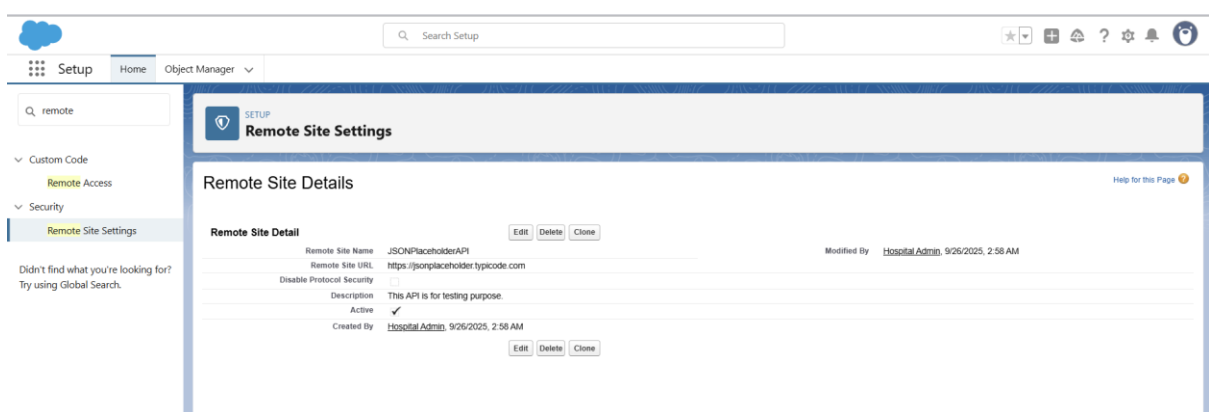

Project: [SmartCare CRM]

Purpose:

This phase focuses on enabling secure communication between Salesforce and external systems. By configuring remote site settings, we ensure that Salesforce can securely make API callouts to external services.

Integration Details:

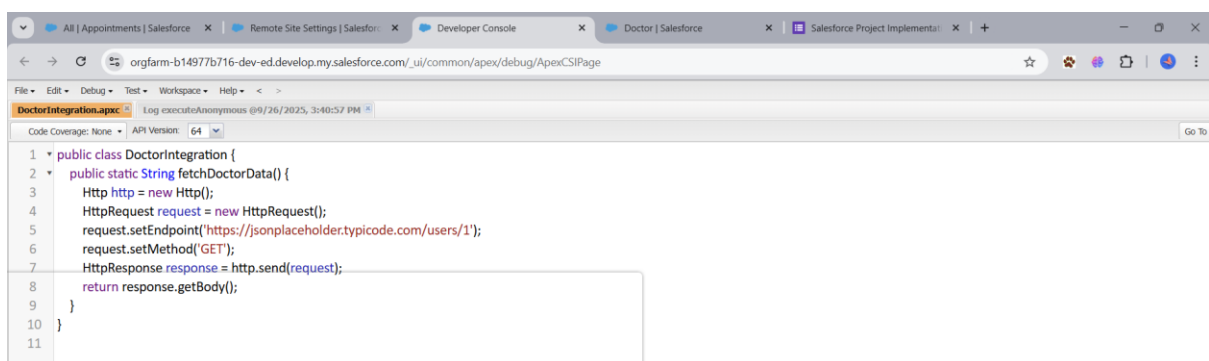

We have configured a remote site setting to allow Salesforce to connect to an external API. This setup is essential for any future integrations and ensures that all data exchanges are secure and compliant.

Here, I have used testing and prototyping external API for my project to create remote site settings

Callouts:

This is used to fetch doctor details

Some of the sample doctor details that are fetched from the API are: you can check this in your debug log after debugging the apex class

Execution Log		
Timestamp	Event	Details
15:40:57:088	USER_DEBUG	[1]DEBUG{
15:40:57:000	USER_DEBUG	"id": 1,
15:40:57:000	USER_DEBUG	"name": "Leanne Graham",
15:40:57:000	USER_DEBUG	"username": "Bret",
15:40:57:000	USER_DEBUG	"email": "Sincere@april.biz",
15:40:57:000	USER_DEBUG	"address": {
15:40:57:000	USER_DEBUG	"street": "Kulas Light",
15:40:57:000	USER_DEBUG	"suite": "Apt. 556",
15:40:57:000	USER_DEBUG	"city": "Gwenborough",
15:40:57:000	USER_DEBUG	"zipcode": "92998-3874",
15:40:57:000	USER_DEBUG	"geo": {
15:40:57:000	USER_DEBUG	"lat": "-37.3159",
15:40:57:000	USER_DEBUG	"lng": "81.1496"
15:40:57:000	USER_DEBUG	}
15:40:57:000	USER_DEBUG	},
15:40:57:000	USER_DEBUG	"phone": "1-770-736-8031 x56442",
15:40:57:000	USER_DEBUG	"website": "hildegard.org",
15:40:57:000	USER_DEBUG	"company": {
15:40:57:000	USER_DEBUG	"name": "Romaguera-Crona",

Conclusion:

The remote site setting has been successfully configured, paving the way for secure external integrations. This completes the foundational integration setup for the project.
